

SECOND CHANCE | All Sports Heroes

MONARCH is the most economical ballistic package offered by **Second Chance** brand. Its hybrid engineered ballistic package offers excellent fragmentation defense and blunt trauma reduction without concession in comfort.

MONARCH®

The Monarch® is one of the most economical ballistic packages offered by the Second Chance® brand. An excellent choice for law enforcement officials who demand the perfect balance of comfort, flexibility and value in a hybrid engineered ballistic package. The Monarch is available as an optional Berry Amendment compliant, Type IIIA package when ordered as the MR01.1.

PRISM is available in Spike and Multi-Threat by providing stab protection against circular penetrators for the corrections market. It has a high degree of protection against correctional threats. Multi-Threat model offers ballistic protection as well.

PRISM®

Featuring Twaron® Microflex™ corrections material, the Second Chance® PRISM® series offers the optimum in protection against circular penetrator threats. Provided in an assortment of product offerings for the NIJ-Standard 0101.05, the PRISM series features woven aramid corrections material to protect against spike and stab threats specific to the corrections market.

SUMMIT is truly the pinnacle in body armor by offering softness and flexibility that doesn't compromise performance.

SUMMIT™

The development of the Summit™ began with a single vision; to bring all of the industry leaders to one table to create a paradigm shift in body armor engineering. This next generation flagship product from Second Chance®, marks the peak of performance in armor, offering unparalleled comfort and exceptional ballistic protection. The Summit incorporates state-of-the-art technologies and the most advanced exclusive materials. The new Summit is truly the pinnacle in body armor, offering the softest most flexible armor, combined with uncompromised performance.

Summit Female is in a class of its own. State-of-the-art technologies and the most advanced exclusive materials in a female structured design. It is also available in unstructured design. Both options are made to fit the needs of today's female officer.

SUMMIT™ FEMALE

Long known and trusted by law enforcement professionals as the premier name in body armor, the Second Chance® Summit™ Female offers unparalleled comfort and flexibility without compromising its exceptional ballistic performance. In a class of its own, this flagship product of the Second Chance brand sets the standard with its proven performance and capabilities against an impressive array of standard and special threats. The structured design of the Summit Female provides the optimal fit for maximum coverage and comfort, both of which are highly demanded by today's female law enforcement officials.

Summit ST came from the desire to build an all DuPont Kevlar package to create one of the thinnest, most flexible, and comfortable vests available.

*All vests **exceed** NIJ testing protocols - the "standard" rounds and test velocities for each threat level as determined by NIJ. **Second Chance** tests for a number of rounds that are more difficult to defeat than those in the NIJ standards. Those rounds (or "special threats") are put through independent third-party testing in conditions that mirror NIJ protocols. The goal is to provide the Agency with data to help determine if a model meets its requirements for street rounds in your geographic area.*

The biggest deciding factors when choosing a vest should be threat level and weight. Our vests are categorized and priced according to these two factors as well as the materials being used. The following information is intended to assist in educating our customers so they can choose the perfect vest for their personal comfort, peace of mind, and protection level.

WHICH THREAT LEVEL SHOULD I CHOOSE?

Traditionally, the threat level you choose should reflect the weapon you are carrying since there is a high chance of being shot in a confrontation by your own weapon. Additionally, consider [which rounds are popular in your field](#). Threat Level II is certified to resist 9mm and .357 FMJ rounds. Threat Level IIIA is certified to resist .357 SIG and .44 Magnum.

SECONDARY CONSIDERATIONS

Comfort: The next biggest deciding factor should be personal comfort level. Often, comfort level is a direct result of the feel of each vest. Second Chance vests are made for a range of comfort preferences from basic and dependable to lightweight and breathable. Ultimately, each person should find the vest that has the capabilities to perform in their field of work.

Weight: When comparing the weight of each ballistic package, remember the unit of measurement is lbs/ft².

Trauma: Trauma is the measurement of the indentation the blunt force of a bullet will cause the on human body. All of our vests are certified under NIJ 06 for a trauma indentation of 44mm or less. 44mm has been determined to be the maximum indentation the human body can withstand without having the potential for internal damage. The way you can tell which vest has the best trauma protection is by looking at the V50 results; the higher the V50, the better the trauma protection. For trauma protection against fragmentation or spike threats, consider our Multi-Threat or Prism series.
